- 154 ITALIAN SERVICE CENTERS**

CARING FOR THE FUTURE

It's not just a matter of talking about performance or technical features, or even stating that we are better than the competition.

We really need to start from people; from users. And if we give them something that can simplify or improve their lives, then they will be happy to follow us.

RESPONSIBILITY

We believe that the safeguard of the environment is possible not only through eco-friendly products, but most of all thanks to responsible individuals. This is why we try to come up with reduced consumption products, working on projects with a low environmental impact, selecting partners and suppliers consistent with our ethics, and implementing green codes of conducts to increase the awareness in all those working at DAB of the importance in reducing waste and in respecting the environment, starting from the most trivial daily activities, both within and outside the company.
